

- The circumference of a circle is 113.04 cm. What is length of the radius rounded to the nearest centimeter?
- The Jones family is adding a rectangular swimming pool to their backyard. The blueprint of the pool measures 5 in. x 8 in. The scale of the blueprint is 1 in. = 2.5 feet. What are the actual dimensions of the pool?
- Jonathan built a scale model of his house. He built the model 5 inches tall to represent the actual height of 20 feet. Write an equation that represents the relationship between the actual height, a , in feet, and the height of the model, m , inches?
- A sweater at Target costs \$28. After tax the sweater is \$30.24. What is the sales tax rate?
- There are three colors of marbles in the bag: red, green, and yellow. If the probability of getting a red was $\frac{2}{5}$ and the probability of getting a green was $\frac{1}{3}$, what is the probability (in fraction form) of getting yellow?
- Simplify $-\frac{1}{3}(12x - 9) - (6x - 4)$
- Betty mixed $1\frac{1}{2}$ gallons of yellow paint with $2\frac{1}{2}$ gallons of blue paint to make green paint for her treehouse. She ran out of green and needs to make more. If she uses 4 gallons of blue paint, to keep the same ratio, how much yellow paint should Betty use?
- Caleb has a job at the grocery store. He earns \$6.25 an hour for bagging groceries and \$4.50 an hour for returning carts. Last night, he bagged groceries for 4 hours and returned carts for 2.5 hours. How much money did Jeff make last night?
- Solve for x . $\frac{x+6}{-2} = -7$
- If $\angle abd$ is 50° , what is the measure of $\angle cbd$?

- Aarav spent \$29 to take his girlfriend to the movies. He spent 30% on snacks and the remainder was spent on the two tickets. How much was each ticket?
- The chart below shows how long Alexis spent on homework the last two weeks, in minutes. What is the approximate difference in each week's average?

	Mon	Tue	Wed	Th
Week 1	26	34	28	32
Week 2	25	32	26	40

- On a set of blueprints for a new home, the contractor has established a scale that states $\frac{1}{2}$ inch = 8 feet. What is the actual width of the living room whose distance is $1\frac{1}{4}$ inch on the blueprints?
- Simplify. Write your answer as a decimal. $-4[2^3 + (\frac{3}{4})^2]$
- Two stores have headphones on sale. Store A has the headphones on sale for 40% off the original price of \$159.99. Store B has the headphones on sale for 25% off the original price of \$130.50. What's the difference in the sale prices?
- Julie bought 3.5 pounds of apples to make a pie. The total was \$3.43. How much does one pound of apples cost?
- Camilla has three pieces of ribbon that measure 6 feet, 3 feet, and 10 feet. Without cutting the ribbon, can Jennifer make a triangle out of the pieces of ribbon?
- What is the volume of the prism to the right?

- Solve for m . $-15 = -4m + 5$
- Simplify $-7(x + 6) + 3x + 14$
